

APPLICATION Brief...

Shaper Lighting

Application: Quick-turn, sheet stock for lighting diffusers

Shaper Lighting

Back in 1952, Shaper started today's trend toward affordable, reliable construction and clean design of interior and exterior commercial lighting.

Founded by architects, Shaper earned a reputation for its ability to provide attractive designs and to accommodate demanding schedules. Shaper's 'MODS' ordering enables customers to alter the color or features of hundreds of standard products to achieve the customer's unique needs—even for the largest order.

The company makes interior, recessed and wall lighting, as well as exterior post top and bollard lighting. "It's quite common for our customer to want modifications, despite the hundreds and hundreds of standard products we offer," says a company rep.

Shaper found Architectural Plastics when they were looking for a supplier with readily available inventory. After that, the company never looked back. Whether it's an oddball size, a different grade or it has to be 'in-stock' -API has always been able to handle the need.

People don't realize how much innovation there is in commercial lighting. Shaper's reputation for balancing beautiful appearance, energy efficiency and effective illumination is their hallmark.

API (Architectural Plastics) has an extensive inventory and the depth of our material and fabrication knowledge is important to the company because many of Shaper's customers take advantage of the company's quick-turn and customization services. We're able to ship often when others cannot.

We are a national distributor for most of the products we handle—like LUMAsite®, Corian®, Acrylite®, Tru Vue Optium®, Imago™, 3form® and Komatex® —with a wide variety of colors, sizes and thicknesses. API helps Shaper Lighting stay ahead of their customer promises. Want to know more? Give us a call!
